# Barranco da Fonte

In the heart of the Natural Park of the southwestern Alentejo and Costa Vicentina, we find the city of Aljezur. Situated in the Algarve Northwest, in the Costa Vicentina, it is collated the north with Odemira, the east with Monchique and Lagos and the south with Vila do Bispo, having the Atlantic Ocean the West.

Leaving Aljezur in direction of Sagres using the Nacional Road 120 and the Road N.º 268, after 4 kilometers, we find a small road to the beach of Vale de Figueiras. After to serpentear some road, we get to Barranco da Fonte. The Barranco da Fonte is composed of five houses, where you will be able to feel the soft breeze sea and for times to hear the racket of the sea when the wind is the favor.

We used a constructive system with land (BTC' S), having as objective to recoup and to value the traditional construction and to reduce the ambient impacts. For using natural local materials and constituting a passive bioclimate system, that uses the thermal mass of the walls as stabilizer of the temperature, a economy of substantial energy, we achieve to provide an high thermal comfort and a solution ambiently integrated and sustainable.

Considering the beauty of the place where we are, you will be able to enjoy its flora and fauna wealth, agriculture activities and classified heritage (historical, archaeological and geologic).

Throughout the landscape the scarps and sands dominate. Beyond the sea, there are water lines that originate temporary lagoons when it rains, and some wet areas, estuaries, as for example, of the Bordeira-Carrapateira, Aljezur and Odeceixe.
